PROFESSIONAL SUMMARY

Mid-Level Full Stack Developer with 2+ years of end-to-end production experience. I architect and deliver RESTful APIs, asynchronous processes and high-performance PostgreSQL queries on large-volume tables. Main stack in PHP/Laravel and Python, with frontend in JavaScript/jQuery. Recognised for technical leadership, code review and mentoring junior developers.

TECHNICAL SKILLS

- **Languages:** PHP, Python, JavaScript, TypeScript, SQL, Java, C#
- **Backend & APIs:** Laravel, Django, Flask, .NET, REST APIs, asynchronous processes
- **Frontend:** React, jQuery, HTML5, CSS3, Tailwind CSS, Bootstrap
- **Databases:** PostgreSQL, MySQL
- **DevOps & Infra:** Docker, Linux, production deploys, Cloudflare Tunnel, Git
- **Other:** Web Scraping, PDF processing, Figma

PROFESSIONAL EXPERIENCE

Eficiência Fiscal — Mid-Level Full Stack Developer Sep/2023 – Present · Ji-Paraná, RO

Promoted to Mid-Level in Feb/2026. Previously: Web Developer (Sep/2023 – Jan/2026).

- Active development of the Eficiencia.app product in Laravel (PHP), working from database modelling through to production deployment.
- Architecting and developing RESTful APIs and asynchronous processes for high-complexity operations.
- Full refactor of the messaging system, improving reliability, observability and maintainability.
- PostgreSQL performance tuning: complex queries, subqueries, indexing and query optimisation on large-volume tables.
- Code review, debugging and code-quality maintenance in production environments.
- Continuous frontend evolution and management of production deploys.
- Training and mentoring of new developers; promoted code-quality and collaboration best practices.
- Contributions in Python and Java across multiple internal projects.

Stack: PHP/Laravel, PostgreSQL, JavaScript/jQuery, Python, REST APIs, Java.

Arquitetura do Saber — Front-End Developer 2023 · Ji-Paraná, RO

- Developed web interfaces on a short-term project.

FEATURED PROJECTS

Mix Generator — Sales Management Platform

2024

Self-built web platform, from design to deploy, for sales management and reporting. Python pipeline that ingests and processes complex PDFs, extracting and structuring data for decision-making.

Stack: Python, Django, PostgreSQL, PDF processing.

github.com/Fimaciel/mix-generator

SIMC — Academic Research Project

2024

Led team organisation and task breakdown, implemented authentication, modelled the database and integrated services. Deployed via Cloudflare Tunnel, exposing a local Arduino-hosted server to production.

Stack: Python, Arduino, Cloudflare Tunnel, authentication, data modelling.

BarbeariaPro API

Personal project

REST API for full barbershop management: bookings, service catalog, customers and financial control.

Stack: C#, .NET, REST API, SQL.

github.com/Fimaciel/BarbeariaPro-API

Other GitHub projects

tTempbr (Java desktop temperature monitor), Aqualimpo (Laravel POS), SMA (Python + Arduino IoT), DocuMentor (JavaScript web app).
